

Advanced Driving Assistance Systems

Safety tailored for every mission

The new Daily is designed to support you in every mission with intelligent, **comprehensive driving assistance systems** that enhance safety, control and ease of operation throughout your working day.

Whatever your mission with the Daily - from urban and regional delivery to construction and demanding municipal operations such as waste collection, road cleaning and road maintenance - ADAS technologies are designed to work by your side, actively supporting you by continuously analysing the surroundings and anticipating potential risks.

In line with the latest General Safety Regulations (GSR-C - including **ADDW, Advanced Driver Distraction Warning**), these systems help protect you and your cargo, while also safeguarding pedestrians, cyclists and other vulnerable road users.

Radar and camera-based sensors work together to deliver constant environmental awareness, helping you handle complex driving situations with greater confidence and precision - from dense traffic to mixed-use and urban work environments.

Built on the Daily's proven robustness, long-lasting durability, dependable performance and outstanding versatility, these systems turn safety into a real productivity advantage - supporting drivers, reducing operational stress and helping your business keep moving efficiently, whatever the mission.
