

Ustoppable by design

More versatile, reliable,
and stronger than ever

The new Eurocargo delivers improved versatility thanks to new factory-ready provisions designed to support additional equipment and mission-specific functionalities.

These upgrades are combined with a more robust vehicle architecture and enhanced component reliability, ensuring consistent performance across demanding duty cycles. Key enhancements include:

A wide **range of PTO options**, offering greater compatibility with diverse auxiliary equipment while benefiting from strengthened driveline interfaces for increased durability.

A new **sandwich PTO** available exclusively on the automatic transmission, engineered to deliver higher power output with reinforced integration to improve long-term operational reliability in high-duty hydraulic applications.

A **factory provision for a third axle** on **16-tonne** and **18-tonne** models, designed with upgraded chassis robustness to support heavier payloads and maintain reliability under intensive usage.
